REMY DE LA CRUZ

remydlc@gmail.com | [linkedin.com/in/remydlc](https://www.linkedin.com/in/remydlc)

CLEARANCE: TS/SCI WITH FULL SCOPE POLY (FSP)

TECHNICAL SKILLS

- **Languages:** Python, Go, Java, TypeScript, Ruby, Bash, SQL
 - **Frameworks & Tools:** Spring Boot, RESTful APIs, AWS CDK, Docker, Kubernetes, Jenkins CI/CD, Prometheus, Grafana, Gitea
 - **Cloud & Security:** AWS (S3, Lambda, IAM, CloudFormation), Security Automation, Web Application Hardening, Access Control, Linux Systems Internals
 - **Databases:** PostgreSQL, MySQL, DynamoDB
-

PROFESSIONAL EXPERIENCE

AMAZON WEB SERVICES (AWS)

Amazon Dedicated Cloud Engineer II | *August 2024 - Present*

- Implemented a cross-domain alarm synchronization framework in TypeScript and Java across more than 50 distinct services, successfully mirroring operational alert states between highside and lowside cloud partitions to improve service visibility.
- Design and build secure automation workflows and automated compliance scripts to maintain strict alignment with rigid government security standards.
- Drive automation excellence by developing custom Python microservices and serverless applications using AWS Lambda, streamlining deployment workflows via CI/CD pipelines.
- Spearhead infrastructure modernization by designing reusable Infrastructure as Code (IaC) architectures using AWS CDK and CloudFormation for mission-critical government-dedicated partitions.
- Provide technical mentorship and hands-on guidance to junior engineers, fostering team growth and documentation excellence.

Systems Engineer II - S3 | *January 2021 - August 2024*

- Contributed to core internal tooling and services utilizing Python, TypeScript, and Ruby to automate infrastructure deployment and enhance global service reliability.

- Engineered an automated filesystem cleanup and fleet maintenance utility, permanently eliminating recurring manual toil and saving an average of 8 engineering hours per month.
- Deeply analyzed complex cloud service interdependencies to isolate root causes and proactively mitigate global system variances before customer impact.

Support Engineer IV, AWS - S3 | *April 2019 - April 2021*

- Programmed custom Python and Bash scripts to automate redundant operational tasks and enhance deep-dive troubleshooting workflows for core S3 storage services.
- Participated in software and architectural design reviews with core development teams to isolate support risks and optimize system metrics.

RAYTHEON

Cyber Security Analyst | *February 2016 - March 2019*

- Performed automated and manual network and host traffic diagnostics using Splunk, Python scripts, and advanced analytical tools to hunt for indicators of compromise (IOCs).
- Designed and executed custom traffic evaluation utilities to streamline incident writeups, providing clear remediation pathways for software development teams.

NBC UNIVERSAL - COMCAST / COMPUCOM

Senior UNIX / Storage Engineer | *October 2005 - March 2019*

- Developed custom Bash scripts to automate monitoring, log aggregation, and OS hardening protocols across a complex fleet of over 2,000+ Linux/UNIX servers.
- Administered massive-scale SAN/NAS infrastructure (100+ Petabytes), executing performance optimization, capacity planning, and hardware lifecycle management.

PROJECTS & LABS

Home Laboratory & DevOps Pipeline (Kubernetes / Jenkins)

- Designed and operate a private cloud infrastructure utilizing a self-hosted Kubernetes cluster deployed automatically through a custom Jenkins CI/CD pipeline.
- Deploy and maintain production-ready microservices and pods including Nextcloud for personal storage, Gitea for source control, and a full Prometheus/Grafana monitoring stack.

Student Management System (Spring Boot / Java)

- Designed and developed a full-stack student management application utilizing Java and the Spring Boot framework to store, update, and manage student records.
- Built a responsive Web UI to dynamically interact with and query the underlying database, implementing clean MVC architectural patterns.

EDUCATION
